Tesung Lin

Beijing, China

Profile

(+86) 18763386500
lindesong666@163.com
github.com/shinoda4
desonglll.xyz

- FDE / full-stack engineer shipping AI products from zero to one in an AI-native team
- Daily Claude Code / Codex user covering clients, backend, gateway, and deployment
- Contract-first, documented, verified changes with rollback-ready releases

Professional Skills

- **AI-assisted development:** Claude Code / Codex as the primary workflow; split work into small, verifiable tasks run in parallel across agents and worktrees, with conventions, contracts, and tests keeping AI output fast to ship and maintainable.
- **Backend and data:** Go, Rust (axum / SQLx), Java (Spring Boot), Python (FastAPI), Node.js; PostgreSQL / Redis data modeling and failure recovery.
- **Clients and communication:** React / TypeScript, SwiftUI; Protobuf / gRPC contracts, REST, SSE, WebSocket.
- **Infrastructure:** Docker, Kubernetes, GitLab CI, GitOps releases and rollbacks; OpenTelemetry and structured logs.
- **AI engineering:** LLM gateways, multi-model routing and billing, streaming inference and realtime ASR, MCP servers.
- **English:** CET-6

Education

Qufu Normal University - MEng in Software Engineering (ongoing) **2024/09 – 2027/06**

- Contributed to a National Natural Science Foundation of China grant proposal

Qufu Normal University - BEng in Software Engineering **2020/09 – 2024/06**

Experience

Beijing Dimension Gate Technology Co., Ltd. **2026/07 – Present**

FDE (Forward Deployed Engineer) Beijing, China

- **AI-native engineering:** Work with Claude Code / Codex as the primary workflow, keeping AI output in check with project conventions, Protobuf contracts, dev logs, and targeted tests; 1,400+ commits across 12 repositories in about four months, spanning iOS, web, Go / Rust services, and Kubernetes releases.
- **Product delivery:** Core developer of MinuteX (AI meeting notes), leading the iOS client and owning major backend modules to bring the product from prototype to launch-ready; also contributed to the Readoow (AI reading) iOS app.
- **Platform infrastructure:** Lead developer of the LLM gateway and contributor to the multi-cluster Kubernetes and GitOps release platform, giving the team unified model access, billing, auditing, and releases.

SiliconFlow Technology Co., Ltd. **2026/03 – 2026/06**

R&D Intern Beijing, China

- **CCE:** Built ComfyUI environment and image packaging workflows for batch plugin cloning, dependency merging, Docker image builds, and verified multi-source model downloads.
- **ComfyAgent:** Contributed to a FastAPI ComfyUI gateway, working on request processing and output caching.
- **BizyDeploy:** Developed a cloud-function deployment CLI and reusable workflow engine with configuration merging and automated deployment.
- **BizyEngine:** Extended the ComfyUI server with model/dataset APIs, API key authentication, third-party integrations, and conversation coordination.

Shunde Machinery Parts Co., Ltd. **2023/02 – Present**

Technical Architecture Consultant / Technical Support (Long-term Part-time) Rizhao, Shandong, China

- **Digital systems:** As the company's technical architecture consultant, independently own the architecture and delivery of its software: product management console, showcase website, Spring Boot API, and iOS client, covering requirements, technology choices, deployment, and long-term operations.
- **Core module rewrite (Rust FFI):** Reimplemented a high-frequency inventory calculation in Rust and exposed it to Django through FFI after the original endpoint began timing out.

Baichen Technology Co., Ltd. **2025/12 – 2026/03**

Backend Delivery Engineer / Technical Support Beijing, China

- Supported government and defense-sector proposals and private delivery into isolated networks, covering server setup, Docker image migration, database initialization, and on-site incident response, with log inspection and backups automated in Shell.

Projects

MinuteX - AI Meeting Notes **2026/07 – Present**

Core Developer (iOS / Backend / Web / Deployment) Beijing Dimension Gate Technology Co., Ltd.

- **iOS client (SwiftUI):** Led development of recording, multi-speaker live transcription, voiceprints, AI notes, and chat; handled background recording, Live Activities, and interruption recovery so long sessions never lose audio, and shipped through TestFlight.
- **Backend and delivery (Go + PostgreSQL + Redis):** Orchestrated transcription, summary, and knowledge-graph AI agents over Buf / gRPC contracts, owning the recording pipeline, durable jobs, and recovery of abnormal recordings; contributed to the web app and released to Kubernetes via GitLab CI and GitOps.
- **Signboard operations dashboard:** Went from empty repository to login, dashboards, image CI, and internal deployment in a single day with AI pair programming, then grew it into a modular host for multiple products.

LLM Gateway - Unified Model Gateway **2026/07 – Present**

Lead Developer Beijing Dimension Gate Technology Co., Ltd.

- Built in Rust (axum / tokio / SQLx), exposing OpenAI-, Anthropic-, and Gemini-compatible APIs over DashScope, Volcengine, Azure, and other upstreams for chat, translation, TTS, and realtime ASR; centralizes authentication, quota billing, request auditing, and tracing, and serves every MinuteX AI agent.
- Led the data-layer migration from Diesel to SQLx and redrew module boundaries between inbound protocols and upstream adapters so new models plug in cleanly; built the matching React console pages for models, channels, tokens, quota approvals, and request audits.

Platform Infrastructure - Multi-cluster Kubernetes and GitOps **2026/07 – Present**

Contributor Beijing Dimension Gate Technology Co., Ltd.

- Added fine-grained RBAC, audit logging, and personal access tokens to sync-k8s, a multi-cluster platform that mirrors resources into PostgreSQL and releases and rolls back from a Git repository; developed platformctl, a Rust CLI for resource queries, health checks, releases, and rollbacks from the terminal.

Shunde Business Platform - Parts ERP and AI Data Assistant ShundeMachinery **2026/07 – Present**

Sole Developer Shunde Machinery Parts Co., Ltd.

- **Business system:** Built single-handedly with AI in about three months: a Spring Boot (Java 25) + PostgreSQL backend and React console that grew from the product catalog and machine fitment into inventory, purchasing, sales, manufacturing, and receivables, with Feishu sign-in, org sync, and approval flows.
- **AI data assistant:** Developed an MCP server that lets AI tools such as Codex query business data read-only under each user's permissions via OAuth; on top of it, built an in-app AI assistant that interprets the question, fetches data through MCP, and verifies the answer independently, citing sources and re-checking permissions before replying.

Echo Gate - Self-hosted Team Messaging desonglll/chat_room 2026/08 – Present

Sole Developer Personal Project

- Built a real-time messaging service in Rust (axum / SQLx) with rooms as the authorization boundary: rooms and direct messages, replies, edits, recalls, resumable attachments, favorites, and AI threads with citations and room-authorized retrieval; React web and PySide6 desktop clients share one API, and deployments range from single-node SQLite to PostgreSQL + Redis + Qdrant.
- Developed with parallel AI agents: one task per worktree, each with its own dev log, and an integration lead merging shared modules; 400 commits in two months, plus a stress-test tool that reports throughput and P95 / P99 latency.

Ax - Rust Full-stack Micro-blogging System desonglll/ax 2024/08 – Present

Sole Developer Personal Project

- Built with Rust (Actix-web / SQLx with compile-time checked SQL), PostgreSQL, and Vue 3: posts, comments, likes, follows, notifications, and attachments, with database triggers keeping counters and notifications consistent and optional OpenAI-compatible auto-titling; registered as a software copyright.

Academic Service

- DFA-SAGE: A Dual-Fusion Aggregation Graph Sampling and Embedding Model for Enhanced Intrusion Detection (accepted, Computer Networks, CCF-B journal)
- Official Reviewer, IJCNN 2026 (WCCI, IEEE CIS flagship conference)

Honors and Awards

Software Copyrights

- AX - Rust Full-stack Social Media System (2026SR0178137) 2026/01
- E-Heyuan Campus Services Platform (2023SR0235691) 2023/02
- Party and Youth League Assistant (2023SR0137018) 2023/01

Competitions

- China Mobile Wutong Cup Digital Innovation Competition, Shandong 2nd Place (national finalist) 2026/02
- National College Mathematics Competition, Shandong 1st Prize (national finalist) 2023/11
- Shandong Collegiate Software Design Contest, Provincial 2nd Prize ×3 2021 – 2022

Distinctions

- Outstanding Graduate of Shandong Province | Qufu Normal University 2023 – 2024
- Graduate Scholarship (2024) | Undergraduate Scholarships (2021, 2022, 2023) 2021 – 2024
